Representation theory is a branch of mathematics that studies abstract algebraic structures by representing their elements as linear transformations of vector spaces, and studies modules over these abstract algebraic structures. In essence, a representation makes an abstract algebraic object more concrete by describing its elements by matrices and the algebraic operations in terms of matrix ...

Papers (publications and preprints): Darij Grinberg, Peter Olver, [Prop] The n body matrix and its determinant, arXiv:1802.02900. The primary purpose of this note is to prove two recent conjectures concerning the n body matrix that arises in recent papers of Escobar--Ruiz, Miller, and Turbiner on the classical and quantum n body problem in d-dimensional space.

Storing a sparse matrix. A matrix is typically stored as a two-dimensional array. Each entry in the array represents an element $a_{i,j}$ of the matrix and is accessed by the two indices i and j . Conventionally, i is the row index, numbered from top to bottom, and j is the column index, numbered from left to right. For an $m \times n$ matrix, the amount of memory required to store the matrix in this ...

Probabilistic Methods of Signal and System Analysis, 3/e stresses the engineering applications of probability theory, presenting the material at a level and in a manner ideally suited to engineering students at the junior or senior level. It is also useful as a review for graduate students and practicing engineers. Thoroughly revised and updated, this third edition incorporates increased use ...
