Industrial computed tomography (CT) scanning is any computer-aided tomographic process, usually X-ray computed tomography, that uses irradiation to produce three-dimensional internal and external representations of a scanned object. Industrial CT scanning has been used in many areas of industry for internal inspection of components. Some of the key uses for industrial CT scanning have been ...

A CT scan, also known as computed tomography scan, and formerly known as a computerized axial tomography scan or CAT scan, makes use of computer-processed combinations of many X-ray measurements taken from different angles to produce cross-sectional (tomographic) images (virtual "slices") of specific areas of a scanned object, allowing the user to see inside the object without cutting.

technique, called backprojection or simple backprojection. Figure 25-16 shows that simple backprojection is a common sense approach, but very unsophisticated. An individual sample is backprojected by setting all the image pixels along the ray pointing to the sample to the same value.

CT scan or CAT scan: How does it work? - Medical News Today

Computertomografie (meestal afgekort tot CT van "computed tomography", ook wel tot CAT van "computer assisted tomography") is een tomografische onderzoeksmethode van het menselijk lichaam. Bij deze methode wordt gebruik gemaakt van röntgenstraling. De doorlaatbaarheid van het onderzochte lichaamsdeel voor de gebruikte straling wordt in een CT-scan vanuit een groot aantal hoeken rondom in een ...
