116 CHAPTER 5 **ATMOSPHERIC PRESSURE, WINDS, AND CIRCULATION PATTERNS** Basic Pressure Systems Before we begin our discussion of circulation patterns leading up to the global scale, we must start by describing the two basic types of pressure systems: the low, or cyclone, and the high, or anti-cyclone.

air masses when they meet. Analyze the movement of two air masses with different temperature and humidity conditions. Devise working definitions for the terms "convection current" and "weather front." Relate the movement of air within the convection model to the formation of land and sea breezes and the development of tornadoes.

The waves arise in a zone of contact between cold polar air and warm tropical air As a result, warm air pushes north and cold air is brought south Eventually, the air mass intrusions are cut off, leaving a pool of cold air at a latitude far south of its normal location
