

### **high frequency trading and pdf**

In financial markets, high-frequency trading (HFT) is a type of algorithmic trading characterized by high speeds, high turnover rates, and high order-to-trade ratios that leverages high-frequency financial data and electronic trading tools. While there is no single definition of HFT, among its key attributes are highly sophisticated algorithms, co-location, and very short-term investment horizons.

### **High-frequency trading - Wikipedia**

Algorithmic trading is a method of executing a large order (too large to fill all at once) using automated pre-programmed trading instructions accounting for variables such as time, price, and volume to send small slices of the order (child orders) out to the market over time. They were developed so that traders do not need to constantly watch a stock and repeatedly send those slices out manually.

Les transactions à haute fréquence, ou trading haute fréquence (THF ou HFT, de l'anglais high-frequency trading), sont l'exécution à grande vitesse de transactions financières faites par des algorithmes informatiques [1]. C'est une des catégories du « trading automatique » (basé sur la décision statistique), qui gagne de plus en plus les données boursières à la manière d'un big ...
