There are also a number of interesting and important computational proteomic questions, which are considered out of the scope of this introduction, and are therefore not covered. These include protein structure elucidation via MS; glycan and lipid analysis; direct profiling of samples by MS, i.e., metabolomics.

Ebook Description. This book presents a new computational methodology called Computational Mass Transfer (CMT). It offers an approach to rigorously simulating the mass, heat and momentum transfer under turbulent flow conditions with the help of two newly published models, namely the  $C^2\mu$  model and the Reynolds mass flux model, especially with regard to predictions of concentration ...

Since infinite precision cannot be achieved with finite resources, the computational representation is a finite precision approximation of the exact value.
