the system of the applied forces and the material behavior The behavior of a material can be studied by  
means of mechanical testing Stress vs. strain diagrams are often used to describe the material behavior  
Stress vs. strain diagrams are supposedly/theoretically identical for the same material, but technically there is  
always some differences

Such a material is elastic according to the description of elasticity given earlier (immediate response, full recovery), and it is also linear in its relation between stress and strain (or equivalently, force and deformation). Therefore a Hookean material is linear elastic, and materials engineers use these descriptors interchangeably.
