### Graph Theory Lecture Notes - Pennsylvania State University

Graph Theory Notes Vadim Lozin Institute of Mathematics University of Warwick 1 Introduction A graph  $G=(V;E)$  consists of two sets  $V$  and  $E$ . The elements of  $V$  are called the vertices ... De nition 1. A simple graph is a nite undirected graph without loops and multiple edges. All graphs in these notes are simple, unless stated otherwise.

Lecture Notes on Graph Theory Vadim Lozin 1 Introductory concepts A graph  $G=(V,E)$  consists of two finite sets  $V$  and  $E$ . The elements of  $V$  are called the ... by allowing  $E$  to contain both directed and undirected edges, we obtain a mixed graph.

Notes for Lecture 8 1 Undirected Connectivity In the undirected s t connectivity problem (abbreviated ST-UCONN) we are given an undirected graph  $G=(V,E)$  and two vertices  $s,t \in V$ , and the question is whether that is a path between  $s$  and  $t$  in  $G$ .

### Notes for Lecture 8 1 Undirected Connectivity

The notes also make reference to the book Combinatorial Optimization: Algorithms and complexity by Christos H. Papadimitriou and Kenneth Steiglitz, published by Prentice Hall, 1982.

structure for directed and undirected graphs on the CS2 lecture notes web page.) Similarly, we may want to store additional information on the edges of a graph. For example, in Example 9.3 we may want to store eight numbers, or in Example 9.4 road names. We can do this by setting up separate edge objects which will store

### CS2 Algorithms and Data Structures Note 9 Graphs

Linked adjacency lists: each adjacency list is a chain, there are  $2e$  node in an undirected graph and  $e$  node in a directed graph (please see page 10 for an example) Array adjacency lists: each adjacency list is an array, the number of elements is  $2e$  in an undirected graph and  $e$  in a directed graph

### DATA STRUCTURES FINAL EXAM NOTES - University of Florida

Introduction to Graph Theory Allen Dickson October 2006 1 The Königsberg Bridge Problem The city of Königsberg was located on the Pregel river in Prussia. The river divides the city into two parts, with two islands in the middle. There are seven bridges connecting the parts of the city. Note that  $G_0$  is a subgraph of  $G$  which also has the property that all of its vertices have even degree. Why? Note also that  $G_0$  may have several
