Concurrent computing is a form of computing in which several computations are executed during overlapping time periods<sup>TM</sup>concurrently<sup>TM</sup>instead of sequentially (one completing before the next starts). This is a property of a system<sup>TM</sup>this may be an individual program, a computer, or a network<sup>TM</sup>and there is a separate execution point or "thread of control" for each computation ("process").

### **Concurrent computing - Wikipedia**

A database is an organized collection of data, generally stored and accessed electronically from a computer system.Where databases are more complex they are often developed using formal design and modeling techniques.. The database management system (DBMS) is the software that interacts with end users, applications, and the database itself to capture and analyze the data.
