

php 7 data structures pdf

This is a list of data structures. For a wider list of terms, see list of terms relating to algorithms and data structures. For a comparison of running time a subset of this list see comparison of data structures

List of data structures - Wikipedia

Parameters. header. The header string. There are two special-case header calls. The first is a header that starts with the string "HTTP/" (case is not significant), which will be used to figure out the HTTP status code to send. For example, if you have configured Apache to use a PHP script to handle requests for missing files (using the ErrorDocument directive), you may want to make sure that ...

PHP: header - Manual

Coordinate values. The figure below shows the Z-values for the two dimensional case with integer coordinates $0 \leq x \leq 7, 0 \leq y \leq 7$ (shown both in decimal and binary). Interleaving the binary coordinate values yields binary z-values as shown. Connecting the z-values in their numerical order produces the recursively Z-shaped curve. Two-dimensional Z-values are also called as quadkey ones.
