Second, human senses have an approximate logarithmic response to stimuli such as light, sound, and heat. For example, the human ear perceives about the same change in loudness between 1 and 10 units of pressure as it perceives between 10 and 100 units of pressure. And finally, in the area of underwater acoustics,...

UNDERWATER ACOUSTICS. Data acquisition Horizontal Range Side scan sonar ranges refer to the range of the display on each side. For example, a range setting of 100 meters provides a 200 meter swath width. What the sonar range should be set to is a function of several factors . such as sea state, thermoclines, sea bed composition,...
