Satellite remote-sensing techniques, employing active and passive optical, thermal, and microwave signals, and coastally operated remote-sensing techniques employing active electromagnetic signals in the HF, VHF, UHF and microwave bands are used on an operational scale for remote detection and quantitative mapping of ocean surface current vectors and circulation patterns.

6 Process of Remote Sensing (4) Application (G) - the final element of the remote sensing process is achieved when we apply the information that we have been able to extract from the imagery about the target, in order to better understand it, reveal some new information, or assist in solving a particular problem.

What is Remote Sensing?

Satellite remote sensing applications in U. S. fisheries have concentrated on the measurements of ocean temperature and color, and computation of ocean transport based on satellite measured wind stress.

Remote sensing is the acquisition of information about an object or phenomenon without making physical contact with the object and thus in contrast to on-site observation, especially the Earth. Remote sensing is used in numerous fields, including geography, land surveying and most Earth Science disciplines (for example, hydrology, ecology, meteorology, oceanography, glaciology, geology); it ...
