Microwave transmission is the transmission of information or energy by microwave radio waves. Although an

experimental 40-mile (64 km) microwave telecommunication link across the English Channel was demonstrated in 1931, ... microwave radio relay systems are being used increasingly in portable radio applications.

Microwave transmission - Wikipedia

A system used for transferring the data between persons and equipments is called communication system. The system usually consists of individual Communication networks, relay stations, transmission system, terminal equipment, interconnection cable and inter-operations performing as an integrated whole.

Introduction to Types of Microwave Antennas in

Microwave radio offers several advantages over cable -based transmission. Microwave radio is simpler, faster, more feasible and more flexible to implement than cable systems.
