Thanks to Google Maps, you can quickly go from one location to any other location with confidence. You can even spot traffic snarls and plan multiple routes. But did you know that you can also measure the shortest distance between two points in a straight line? That is, you can ask Google Maps to ...

### **How to Find the Shortest Distance Between Two Points on**

In graph theory, the shortest path problem is the problem of finding a path between two vertices (or nodes) in a graph such that the sum of the weights of its constituent edges is minimized.. The problem of finding the shortest path between two intersections on a road map may be modeled as a special case of the shortest path problem in graphs, where the vertices correspond to intersections and ...

The great-circle distance or orthodromic distance is the shortest distance between two points on the surface of a sphere, measured along the surface of the sphere (as opposed to a straight line through the sphere's interior).The distance between two points in Euclidean space is the length of a straight line between them, but on the sphere there are no straight lines.

OSPF employs a hierarchical network design using Areas. OSPF will form neighbor relationships with adjacent routers in the same Area. Instead of advertising the distance to connected networks, OSPF advertises the status of directly connected links using Link-State Advertisements (LSAs).

The heuristic function  $h(n)$  tells  $A^*$  an estimate of the minimum cost from any vertex  $n$  to the goal. Itâ€™s important to choose a good heuristic function. # $A^*$ â€™s Use of the Heuristic The heuristic can be used to control  $A^*$ â€™s behavior. At one extreme, if  $h(n)$  is 0, then only  $g(n)$  plays a role, and  $A^*$  turns into Dijkstraâ€™s Algorithm, which is guaranteed to find a shortest path.
