The thermal conductivity of a material is a measure of its ability to conduct heat. It is commonly denoted by k , λ , or \dots . Heat transfer occurs at a lower rate in materials of low thermal conductivity than in materials of high thermal conductivity.

In physics, a field is a physical quantity, represented by a number or tensor, that has a value for each point in space-time. For example, on a weather map, the surface temperature is described by assigning a real number to each point on a map; the temperature can be considered at a fixed point in time or over some time interval, if one wants to study the dynamics of temperature change.

Physical Geology, by Brian J. Skinner and Stephen C. Porter A well written introductory textbook on physical geology with lots of figures. The Solid Earth - An Introduction to Global Geophysics, by C.M.R. Fowler This book has nothing to do with quartz but is about the inner workings of the planet earth, and it clearly addresses expert readers and undergraduate students of geology.
