The transient thermal simulation tool is established to aid in the conceptual design and material selection of the disc rotor and brake pad.

Transient Thermal Analysis of a Heating Element Objectives:   
• Create a solid model of the heating element.   
• Apply thermal load of convection, heat generation, heat flux, and fixed temperature to the model.   
• Run a transient heat transfer analysis of the plate.

Thermal Analysis This guide starts from applications of thermal analysis and its role in simulation driven design. Fundamental concepts and principles will be introduced such as conduction, convection, radiation, linear and nonlinear heat transfer, steady state and transient analysis, etc.

M. Bahrami ENSC 388 (F09) Transient Conduction Heat Transfer 1 Transient Heat Conduction In general, temperature of a body varies with time as well as position. Lumped System Analysis Interior temperatures of some bodies remain essentially uniform at all times during a heat transfer process.

A thermal analysis can be used to study the effects that temperature has on components or assemblies. Using a transient analysis can show you how the temperature varies with time. This tutorial will help you understand the basics of performing a transient thermal analysis in SolidWorks.

transient thermal analysis using the same model but different boundary conditions. From the heat transfer equation we can see that the heat flux is directly proportional to the time and so we have analyzed the transient

Transient thermal analysis - Thermal interface. Body 1 is the cavity with a hole in the middle where body 2 is assembled and bonded. I run the simulation for 480 seconds. The heat in the model is transferred by conduction. Convection is applied at the top surfaces of both bodies and the boundaries of body 1 that contains body 2.

dependency needs to be included in the analysis. 2.3. Transient Thermal Response Of course, the duality extends to transient as well as steady state conditions. The existence of capacitance in both domains results in thermal RC responses like those we are familiar with in the electrical domain. The basic relationships follow.  $t Q = R C$  (Eq. 2)
