Transistor logic (TTL) is a logic family built from bipolar junction transistors. Its name signifies that transistors perform both the logic function (the first "transistor") and the amplifying function (the second "transistor"); it is the same naming convention used in resistor logic (RTL) and diode transistor logic (DTL). ...

9.SHOP PRACTICES. Knowing about good electronic shop practices begins with introduction to the basic tools and test instruments used in electronic repair, production and troubleshooting. It continues with "hands-on" activity directed towards learning practical skills such as soldering and de-soldering and making connecting leads and cables.

The 7400 series of transistor logic (TTL) integrated circuits are the most popular family of TTL integrated circuit logic. Quickly replacing diode transistor logic, it was used to build the mini and mainframe computers of the 1960s and 1970s. Several generations of pin-compatible descendants of the original family have since become de facto standard electronic components.

1 Introduction HCMOS data sheets specify, under recommended operating conditions, input tt = 1000 ns, (10% to 90%) for VCC = 2 V. If certain devices are used in the threshold region (from V ILmax = 0.5 V to V IHmin = 1.5 V), there is a potential to go into the wrong state from induced grounding, causing double clocking.
